HEALTH PROBLEMS ORIGINATES IN THE MOUTH

Periodontal Disease. What does it mean?

Periodontitis is a disease of the gums and the jaw bone caused by bacteria. It is considered to be the most common cause of tooth loss among adults.

DID YOU KNOW:

Organisms can be transmitted through kissing.

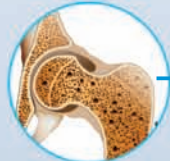

It might be genetic.

It might lead to premature birth.

It might cause diabetes.

It is associated with osteoporosis.

It might cause circulatory diseases such as: strokes & heart attacks.

Smokers are at a higher risk of losing their implants.

Find out if you are prone to developing gum disease and bone loss by testing with the IL-1 DNA test.
